Established multi-doctor group practice 1989 when H.C.A. opted out of dentistry
No longer practice due to an eye problem, am presently management/consultant for Dental Associates.

Hobby

Modeler almost continuously for 57 years, have built and flown everything:
Hand launched gliders,
Free flight,
Control line,
and Radio Controlled (RC).

Built and flew the classic Comet, Megow, Ace Whittman dime store models from age seven, following the example of an older boy who lived across the street.

Received a “real” gas engine (a Vivell 35) for my 13th birthday.

First flew Control Line in 1946: first time I ever saw Control Line model in flight I had the handle!

Tried RC in 1953, went back to Free Flight and Control Line until 1973.

My two sons and I competed regionally and nationally through the 1960s and 1970s, winning over a hundred trophies including national firsts in such diverse events as U/C scale, rubber powered scale, gas powered scale, tow line gliders and many other events.

They at one time held three national records. Have designed and had published 69 construction

articles ranging from tiny C02 powered sport Free Flights to 80 inch span 15 pound sport RC models.

Have also written 17 product reviews and how to articles.

Articles have appeared in:

Model Airplane News,
Flying Models,
Model Aviation,
Model builder
RC Modeler and
Airbourne in Australia.

Contributing editor, Model Aviation Magazine for 18 years.

Wrote a bi monthly column "Old-Timers" from Feb. 1978 to Dec. 1990.

Changed to a broader format with "Flying for Fun" Jan. 1991 to present.

The columns generate about 20 letters per month with questions or requests all are, of course, answered.

Designed 8 models that are currently kitted on royalty by ACE RC and two that are kitted by other manufacturers (plus one that is not credited to me).

Summary

I could go on and on with soupy stuff about my lifetime fascination with building and flying model airplanes, but the best way I can express it is my desired epitaph: "HE BROUGHT SOME MOMENTS OF GOOD FUN TO A LOT OF MODELERS."
