When most pilots think of building a model aircraft, balsa comes to mind. However, more models are being crafted out of foam.

The original Flying Aces Club was mostly a fan club for younger readers of Flying Aces magazine, but the organization has evolved throughout the years.

This aircraft is a jack-of-all-trades that adapts to different flying conditions and pilots. Although it's probably not the fastest or most aerobatic, it is dead simple, tough, and has a super-wide flight envelope.

The modern, iron-on covering material discussed in this article takes only one skill: to properly apply it. Color and finish are included!
